

近期香港失業人口的概況

The Recent Profile of Unemployed Population in Hong Kong

隨着近期經濟向下調整，香港勞工市場於一九九八年上半年顯著放緩。失業率由一九九七年的2.2%急升至一九九八年第二季的4.3%。本文旨在分析近期香港失業人口的特徵。

Along with the recent economic downward adjustment, there was a marked easing in the labour market conditions of Hong Kong during the first half of 1998. The unemployment rate increased sharply from 2.2% in 1997 to 4.3% in the second quarter of 1998. This article aims to analyse the characteristics of the latest unemployed population of Hong Kong.

近期香港失業人口的概況

The Recent Profile of Unemployed Population in Hong Kong

1. 引言

1.1 香港經濟自一九九七年後期開始向下調整，隨着近期經濟不景，勞工市場亦顯著放緩，失業人數和失業率均持續上升。

1.2 失業已經成為社會關注的焦點之一。有關失業的統計量數對經濟情況提供一個指標，亦反映勞動力剩餘的情況。

1.3 有關失業的統計數字是根據綜合住戶統計調查獲取的數據編製所得。現時綜合住戶統計調查每季的樣本規模約為 27 000 個屋宇單位。這項統計調查採用循環式複樣本設計。按照這抽樣方式，某一月份被抽中的樣本單位，有半數在三個月後再成統計對象。在被抽中的屋宇單位內，所有有關人士均被問及關於個人、勞動力及住戶特徵的資料。

1.4 本文旨在對近期香港失業人口的特徵作分析，從而令讀者對失業有更清楚的了解。

2. 概念架構

2.1 有關勞動力、失業等的統計數字，均按照國際勞工組織建議的架構編製。

2.2 根據每位人士的經濟活動身分，可將人口劃分為從事經濟活動人口及非從事經濟活動人口兩大類。

1. Introduction

1.1 The Hong Kong economy has experienced a downward adjustment starting from the latter part of 1997. Along with the recent setback in economic activity, there was a marked easing in the labour market conditions. Both the number of unemployed persons and the unemployment rate recorded a continuous increase.

1.2 Unemployment has become one of the focal issues of social concern. Statistical measures of unemployment provide an indication of the situation of the economy and also reflect the extent of unused capacity in the labour force.

1.3 Unemployment statistics are compiled based on data obtained from the General Household Survey (GHS). The current quarterly sample size of the GHS is about 27 000 quarters. A rotational replicate sample design is adopted such that half of the sample in a month will be enumerated again three months later. Information on personal, labour force and household characteristics is collected from all persons in the sampled quarters where appropriate.

1.4 This article provides an analysis on the characteristics of the latest unemployed population of Hong Kong. It aims to give a better understanding about unemployment.

2. Conceptual framework

2.1 Statistics on the labour force, unemployment and so on are produced in accordance with the framework recommended by the International Labour Organization (ILO).

2.2 The population can be divided into two main groups according to their economic activity status, viz. the economically active population and the economically inactive population.

2.3 從事經濟活動人口，亦稱勞動人口，可分為就業人口及失業人口。勞動人口參與率是指勞動人口佔所有十五歲及以上陸上非住院平民人口的比例。勞動人口參與率是用來量度勞動適齡人士作為勞動人口的傾向。

2.4 非從事經濟活動人口包括所有在統計前七天內並無職位亦無工作的人士，在這七天內正在休假的人士及失業人士除外。非從事經濟活動人口主要包括料理家務者、退休人士及十五歲以下的人士等。

2.5 就業人口包括所有在統計前七天內從事一些工作賺取薪酬/利潤或有一份正式工作的十五歲及以上的人士。

2.6 失業人口由所有失業人士構成。一名十五歲或以上人士符合下列情況，便界定為失業人士：

- (a) 在統計前七天內並無職位，且並無為賺取薪酬或利潤而工作；及
- (b) 在統計前七天內隨時可工作；及
- (c) 在統計前三十天內有找尋工作。

另外，一名十五歲或以上的人士，如果他/她符合上述(a)和(b)的條件，但由於相信沒有工作可做而在統計前三十天內沒有找尋工作，亦會被界定為失業，即所謂「因灰心而不求職的人士」。

2.7 失業率是指失業人士在勞動人口中所佔的比例。計算方法是將失業人數除以勞動人口數目，再乘以100%。

2.3 The *economically active population*, also known as the *labour force*, comprises the employed population and the unemployed population. Labour force participation rate refers to the proportion of labour force in the total land-based civilian non-institutional population aged 15 and over. This is a measure of the working age population's propensity to be in the labour force.

2.4 The *economically inactive population* is made up of those persons who have not had a job and have not been at work during the seven days before enumeration, excluding persons who have been on leave/holiday during the seven-day period and persons who are unemployed. It comprises mainly home-makers, retired persons and those below the age of 15.

2.5 The *employed population* comprises all those persons aged 15 and over who have been at work for pay/profit or have had formal job attachment during the seven days before enumeration.

2.6 The *unemployed population* comprises all unemployed persons. For a person aged 15 or over to be classified as unemployed, that person should:

- (a) not have had a job and should not have performed any work for pay or profit during the seven days before enumeration; *and*
- (b) have been available for work during the seven days before enumeration; *and*
- (c) have sought work during the thirty days before enumeration.

Besides, if a person aged 15 or over fulfils the conditions (a) and (b) above but has not sought work during the thirty days before enumeration because he/she believed that work was not available, he/she is still classified as unemployed, being regarded as a so-called "discouraged worker".

2.7 Unemployment rate refers to the proportion of unemployed persons in the labour force. It is computed as the number of unemployed persons divided by the size of the labour force and multiplied by 100%.

2.8 有一點要留意，「失業」所指的是一種狀態，而並不同「失去職業」事件，例如遭解僱或遣散，或是因其他理由而離職。故此，一些受解僱或因其他理由離職的人士，如果在很短期內（即少於七天）已從事另一份工作，雖然他們在這期間內曾「失去職業」，但根據定義，他們並不算在失業人口內。

2.9 就業不足人口包括在統計前七天內在非自願情況下工作少於三十五小時，而在統計前三十天內有找尋更多工作，或即使不是找尋工作，但在統計前七天內可擔任更多工作的人士。就業不足人口為就業人口的一部分。

2.10 本文旨在對失業人口的特徵作分析，並沒有包括就業人口（包括就業不足人士）的分析。

2.11 綜合住戶統計調查採用了很有結構性的問卷以搜集所需的數據，從而客觀和準確地界定被訪者的經濟活動身分。

2.12 有關資料項目、概念和定義的更詳細資料，刊載於「綜合住戶統計調查按季統計報告」內。

2.8 It should be noted that “unemployment” is a state of affairs, being not the same as events of “losing a job” like dismissal or lay-off or having left a job for other reasons. Thus, for persons who have been dismissed from their jobs or who have left their jobs for certain reasons, but have managed to take up another job within a short period of time (i.e. within seven days), they are by definition not counted in the unemployed population, even though they have experienced the event of “losing a job” during the period.

2.9 The *underemployed population* comprises those employed persons who have involuntarily worked less than 35 hours during the seven days before enumeration and have sought additional work during the thirty days before enumeration, or have not sought but have been available for additional work during the seven days before enumeration. The underemployed population is a part of the employed population.

2.10 This article aims to analyse the characteristics of the unemployed population. Analysis of the employed population, including those who are underemployed, is not included.

2.11 A well-structured questionnaire is adopted in the GHS to collect the required data for classifying the economic activity status of the respondents objectively and accurately.

2.12 Greater details on the data topics, concepts and definitions are given in the “Quarterly Report on General Household Survey”.

3. 失業率變動的趨勢

3.1 在八十年代後期，失業率處於十分低的水平。它從一九八九年的 1.1%（這是有紀錄以來的最低數字）上升至九五年的 3.2%，隨後回落至九七年的 2.2%。其後，隨着經濟不景，失業率急升至九八年第二季的 4.3%。同期的經季節性調整的失業率（即已按首次求職人士佔勞動人口比例的季節性差異作出調整）則為 4.4%。（表一和圖一）

3.2 男性及女性失業率的趨勢大致相同。雖然在一九八九至九三年期間，兩性間的失業率無顯著差距，但近幾年男性的失業率較女性的明顯為高。一九九八年第二季的男性失業率較女性失業率高出 1.0 個百分點。（表一和圖一）

3. Trend of changes in the unemployment rate

3.1 In the late 80s, the unemployment rate was very low. It then increased from a record low of 1.1% in 1989 to 3.2% in 1995, and then dropped to 2.2% in 1997. After that, the rate increased sharply to 4.3% in the second quarter of 1998 (Q2 1998) along with the setback in the economy. The seasonally adjusted unemployment rate (i.e. adjusted for seasonal variations in the proportion of first-time job-seekers in the labour force) in the same period was 4.4%. (Table 1 and Chart 1)

3.2 The unemployment rates for males and females followed a broadly similar trend. While there was no significant difference between the unemployment rates for the two sexes during 1989 to 1993, the unemployment rate for males was significantly higher than that for females in more recent years. In Q2 1998, the unemployment rate for males was 1.0 percentage point higher than that for females. (Table 1 and Chart 1)

註釋 : 粗字體的數字為失業人數 (以千人計), 括號內數字則為相應的失業率 (指在相應的年齡組別中, 失業人士在勞動人口中所佔的比例)。

Note : Figures in bold type refer to number of unemployed persons (in thousand). Bracketed figures are the corresponding unemployment rates (i.e. the proportion of unemployed persons in the labour force in the corresponding age group).

4. 一九九八年第二季的失業人口的基本概況

性別

4.1 一九九八年第二季的失業人數為 143 700 人, 其中男性有 95 700 人 (佔 66.6%), 女性有 48 000 人 (佔 33.4%)。男性的失業率 (4.7%) 較女性的 (3.7%) 為高。(表一)

年齡

4.2 按年齡分析, 二十至二十九歲年齡組別的失業人士為數最多, 達 39 800 人, 佔所有失業人士的 27.7%。以失業率而言, 十五至十九歲年齡組別的人士受到最大的影響, 其失業率處於高水平, 達 17.5%。這情況部分是由於在這個年齡組別中, 首次求職人士佔較大比例的緣故。(表二)

4. Basic profile of the unemployed population in Q2 1998

Sex

4.1 The number of unemployed persons in Q2 1998 was 143 700. Among them, 95 700 (66.6%) were males and 48 000 (33.4%) were females. The unemployment rate for males (4.7%) was higher than that for females (3.7%). (Table 1)

Age

4.2 Analysed by age, the number of unemployed persons was largest in the 20-29 age group, with 39 800 persons. They constituted 27.7% of all unemployed persons. In terms of unemployment rate, persons in the 15-19 age group were hardest hit, with a high unemployment rate of 17.5%. This can be partly attributed to the greater proportion of first-time job-seekers in this age group. (Table 2)

教育程度

Educational attainment

4.3 在一九九七及一九九八這兩年的第二季，大部分失業人士為中學或預科程度的人士。由於勞動人口中有很多（近 60%）具中學或預科程度，故這並不表示具中學或預科程度的人士有較大的機會面臨失業。事實上，失業率以具小學程度的人士（ 5.4%）為最高。（表三）

4.3 In both Q2 1997 and Q2 1998, the majority of unemployed persons were those who had secondary or matriculation education. As the labour force comprised mainly (nearly 60%) those who had attained this educational level, this does not necessarily mean that those with secondary or matriculation education have a higher propensity of being unemployed. In fact, the unemployment rate was highest for those who had primary education (5.4%). (Table 3)

表三 一九九七年第二季及一九九八年第二季按教育程度劃分的失業人數
Table 3 Unemployed persons by educational attainment, Q2 1997 and Q2 1998

註釋 : # 指在某一特定教育程度組別的失業率。

Note : # Unemployment rate in respect of the specified educational attainment group.

5. 以前曾工作的一九九八年第二季失業人士

5.1 在一九九八年第二季的 143 700 名失業人士中，133 400 人以前曾工作（不包括首次求職人士及重新加入勞動人口的失業人士，因為沒有關於他們以前從事工作的資料）。本章是有關他們以前從事的行業和職業的分析。（表四）

5.2 有關各個行業的失業人數和比例，反映每個行業的勞動力剩餘情況，而有關各個行業的失業率，則反映每個行業在失業方面的嚴重程度。但是，要注意兩點：(i) 有關按行業劃分的失業率，由於在計算分子和分母時，失業人士是按其以前從事的行業劃分，因而未必是他們日後將從事工作的行業；(ii) 沒有首次求職人士和重新加入勞動人口的失業人士所屬行業的資料。因此，按行業劃分的失業率不能與整體的失業率作嚴謹比較，同時亦須謹慎闡釋。

5.3 上段(5.2 段)的詮釋除適用於「行業」分析外，亦適用於「職業」的分析。

以前從事的行業

5.4 就曾工作的失業人士而言，按其以前從事的行業類別分析，以前從事批發、零售、進出口貿易、飲食及酒店業的人數由一九九七年第二季的 22 700 顯著上升至一九九八年第二季的 49 800。相對之下，在一九九八年第二季，以前從事金融、保險、地產及商用服務業的失業人數只有 10 900（佔所有曾工作的失業人士的 8.1%）。（表四）

5.5 在一九九八年第二季，以前從事建造業的人士的失業率為最高（7.6%），其次是製造業（5.0%）和批發、零售、進出口貿易、飲食及酒店業（4.9%）。（表四）

5. Unemployed persons in Q2 1998 with a previous job

5.1 Of the 143 700 unemployed persons in Q2 1998, 133 400 had a previous job (not including first-time job-seekers and re-entrants into the labour force for whom information on the previous job was not available). Analyses of the previous industry in which they were engaged as well as their previous occupations are given in this section. (Table 4)

5.2 The number and proportion of unemployed persons in respect of various industries reflect unused capacity in the labour force for each industry, while the unemployment rates in respect of various industries reflect the degree of severity of unemployment in each industry. However, two points have to be noted regarding unemployment rates by industry: (i) in deriving both the numerator and the denominator, unemployed persons are classified according to their previous industry which may not necessarily be the one which he/she will enter subsequently; and (ii) there is no information on previous industry in respect of first-time job-seekers and re-entrants into the labour force. Such rates are therefore not strictly comparable to the overall unemployment rate and should be interpreted with caution.

5.3 Apart from being applicable to the analysis in "industry", the remarks in the last paragraph (paragraph 5.2) are also applicable to "occupation".

Previous industry

5.4 Analysed by the industry sector in which these unemployed persons had previously been engaged, the number of unemployed persons with a previous job in the wholesale, retail and import/export trades, restaurants and hotels sector increased significantly from 22 700 in Q2 1997 to 49 800 in Q2 1998. In contrast, only 10 900 (or 8.1% of all unemployed persons with a previous job) were from the financing, insurance, real estate and business services sector in Q2 1998. (Table 4)

5.5 In Q2 1998, the unemployment rate for the construction sector was the highest (7.6%), followed by that for the manufacturing sector (5.0%) and the wholesale, retail and import/export trades, restaurants and hotels sector (4.9%). (Table 4)

5.7 按年齡分析，在十五至二十九歲和三十至四十九歲的年齡組別中，以前從事批發、零售、進出口貿易、飲食及酒店業的失業人士均佔最大比例，分別佔相應年齡組別中所有曾工作的失業人士的 48.7%和 33.1%。而在五十歲及以上的年齡組別中，則以以前從事製造業的失業人士佔最大比例（佔 26.4%），其次緊隨着是批發、零售、進出口貿易、飲食及酒店業（佔 26.0%）和建造業（佔 25.3%）。（表六）

5.7 When analysed by age, the largest proportion of unemployed persons for both the age groups 15-29 and 30-49 was from the wholesale, retail and import/export trades, restaurants and hotels sector, constituting 48.7% and 33.1% of all unemployed persons with a previous job in the corresponding age groups respectively. For the age group 50 and over, the largest proportion was from the manufacturing sector (26.4%), followed closely by the wholesale, retail and import/export trades, restaurants and hotels sector (26.0%) and the construction sector (25.3%). (Table 6)

以前從事的職業

5.8 就曾工作的失業人士而言，按其以前從事的職業分析，在一九九八年第二季，曾任職服務工作及商店銷售人員的人士為數最多，有 29 000 人（佔所有曾工作的失業人士的 21.8%）。另一方面，曾任職專業人員的人士在所有主要職業組別中為數最少，只有 1 300 人（佔 1.0%）。（表七）

5.9 在一九九八年第二季，以前曾任職工藝及有關人員的人士的失業率為最高(6.2%)，其次是以前曾任職服務工作及商店銷售人員的人士(6.0%)。（表七）

Previous occupation

5.8 With regard to the previous occupation of the unemployed persons in Q2 1998, those who had previously been service workers and shop sales workers constituted the largest group, totalling 29 000 (or 21.8% of all unemployed persons with a previous job). On the other hand, the number of those who had previously been professionals was smallest among all major occupational groups, being only 1 300 (1.0%). (Table 7)

5.9 In Q2 1998, the unemployment rate for those who had previously been craft and related workers was highest (6.2%), followed by those who had previously been service workers and shop sales workers (6.0%). (Table 7)

離職方式

5.12 按離職方式分析，大部分的失業人士是遭解僱或遣散，其人數由一九九七年第二季的 36 400 人增加至一九九八年第二季的 94 400 人，急升 159.0%。（表十）

Mode of leaving last job

5.12 When analysed by the mode of leaving last job, it was found that the majority of the unemployed persons were dismissed or laid off. The number of such persons increased sharply by 159.0%, from 36 400 in Q2 1997 to 94 400 in Q2 1998. (Table 10)

6. 一九九八年第二季的求職人士

尋找工作的主要方法

6.1 在一九九八年第二季的 143 700 名失業人士中，137 300 人在統計前三十天內曾積極找尋工作。大部分（62.0%）的求職人士皆用回應或刊登廣告方式作為尋找工作的主要方法。（表十一）

6. Job-seekers in Q2 1998

Main action taken to seek work

6.1 Of the 143 700 unemployed persons in Q2 1998, 137 300 had actively sought work during the thirty days before enumeration. The majority (62.0%) of these job-seekers answered or placed advertisement as their main action taken to seek work. (Table 11)

其他 Others	5.6	8.7	12.7	9.3
總計 Total	64.3	100.0	137.3	100.0

期望從事的行業

6.2 就這些求職人士而言，按其期望從事的行業類別分析，批發、零售、進出口貿易、飲食及酒店業和建造業為求職人士最期望從事的行業。相對之下，只有5.0%的求職人士期望從事金融、保險、地產及商用服務業。這些情況在一九九七年第二季與一九九八年第二季大致相同。（表十二）

Desired industry of employment

6.2 When analysed by the industry sector in which these job-seekers intended to work, the wholesale, retail and import/export trades, restaurants and hotels sector and the construction sector were the two most popular sectors which the job-seekers desired to work in. In contrast, only 5.0% of these job-seekers desired to work in the financing, insurance, real estate and business services sector. These phenomena were broadly similar in Q2 1997 and Q2 1998. (Table 12)
